

LIBRARY MANAGEMENT SYSTEM

ANJU K S

Creating a database named Library Management System.

The screenshot shows a SQL IDE window titled "SQL File 3* x". The toolbar includes icons for file operations, execution, and a "Limit to 1000 rows" dropdown. The SQL editor contains the following code:

```
1  -- Create the Library Management System database
2  • CREATE DATABASE LibraryManagementSystem;
3
4  -- Use the Library Management System database
5  • USE LibraryManagementSystem;
```

Below the editor is an "Output" section with a dropdown menu set to "Action Output". It displays a table of execution results:

#	Time	Action
✓ 1	23:37:20	CREATE DATABASE LibraryManagementSystem
✓ 2	23:37:20	USE LibraryManagementSystem

Creating table Branch and setting Branch_no as primary key

```
7 • CREATE TABLE Branch (  
8     Branch_no INT PRIMARY KEY NOT NULL,  
9     Manager_Id INT NOT NULL,  
10    Branch_address VARCHAR(200),  
11    Contact_no VARCHAR(20) UNIQUE  
12 );  
13
```

Output:

Action Output

#	Time	Action	Message
✓ 1	23:46:08	CREATE TABLE Branch (Branch_no INT PRIMARY KEY NOT NULL, Manager_Id INT NOT NULL, Bra...	0 row(s) affected

Creating TABLE Employee and setting Employee_id as primary key

```
14 • CREATE TABLE Employee (  
15     Emp_Id INT PRIMARY KEY NOT NULL,  
16     Emp_name VARCHAR(45),  
17     Position VARCHAR(45),  
18     Salary DECIMAL(10,2),  
19     Branch_no INT,  
20     FOREIGN KEY (Branch_no) REFERENCES Branch(Branch_no)  
21 );  
22  
23
```

CONCLUSION

The Library Management System project provides an efficient way to analyze, organize, and manage library resources. By using MySQL queries, it effectively handles employee tracking, book status, customer records, and more. It facilitates extracting various information about the library environment, including book availability, customer preferences, and rental prices contributing to better library management.
